Custom Artificial Trees & Plants for Commercial Spaces

Safety • Durability • Realism

About Us

MORE THAN A MANUFACTURER

We do not position ourselves as a catalogue-first supplier. We position Oakco as a commercial foliage system partner.

Every project starts with an idea — a space that needs impact, realism, and lasting quality. Our company transforms that idea into custom artificial tree solutions for hotels, malls, theme parks, and public spaces. By combining craftsmanship, structural reliability, and project-focused thinking, we create commercial greenery that is both visually impressive and ready for real-world use.

We are not just a manufacturer, but a reliable project partner.

Project-ready customization

Species, height, canopy width, trunk style, and planter integration can be aligned to the application.

Commercial use focus

Suitable for hotels, malls, retail, themed venues, public spaces, and other high-visibility interiors.

Clear delivery workflow

The process moves from concept review and proposal planning to production, packing, and shipment.

Practical sourcing support

Reference images, dimensions, drawings, and quantity plans can all be translated into a workable proposal.

Who We Serve

Architects & Interior Designers

Specification support, realism standards, model selection, and project packs that simplify decision-making.

Developers & Operators

Commercial-grade greenery for hotels, malls, branded environments, workplaces, and destination spaces.

Procurement & Buying Teams

Clear model structures, flexible quantities, DDP support for selected projects, and practical delivery coordination.

Fabricators & Install Partners

Bespoke components, modular systems, and collaboration where installation realities matter.

What We Deliver

A STRUCTURED OFFERING FOR DESIGN-LED AND PERFORMANCE-LED COMMERCIAL ENVIRONMENTS.

Main categories

Artificial trees, green walls, planter landscapes, moss, lawns, faux rock, illuminated features, bespoke vessels.

Project support

Model selection, layout thinking, project packs, specification guidance, DDP-ready delivery for selected orders.

Three system pillars

PyroLeaf fire performance, HelioLeaf UV stability, High Realism visual standard.

Bespoke capability

Custom sizes, structures, finishes, on-site fabricated cement trees, and integrated scenography.

Built for retail, hospitality, workplace, public interiors, exterior arrival zones, and branded feature spaces.

Three System Pillars

THE FRAMEWORK THAT TURNS PRODUCT SELECTION INTO A PROJECT DECISION.

PyroLeaf®

Fire performance system for commercial interiors where specification readiness matters.

HelioLeaf®

UV stability system for light-exposed and outdoor installations where visual consistency must hold.

High Realism

Visual quality system built around layering, variation, and material detailing for premium commercial perception.

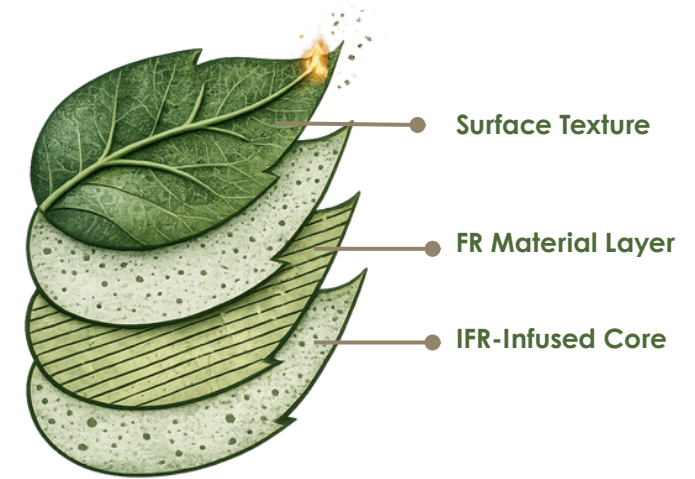

PyroLeaf® is our fire-performance pathway for projects where artificial foliage must support commercial specification requirements. The system is presented to simplify conversations around risk, approval, and material selection in interiors where reliability matters.

Fire-performance option for selected foliage and tree models

Specification wording available for project documentation

Suitable for hospitality, retail, offices, and public-facing interiors

Can be combined with high-realism selections for design-led schemes

Fire-Retardant Technology for Commercial Artificial Trees

Recommended future addition: UV performance explainer diagrams, before/after comparison imagery, and spec-copy buttons.

Outdoor hospitality

Palm trees, planters, and softened resort-style zones that need consistency under light.

Arrival zones

Outdoor planters and façade-adjacent planting that support brand image.

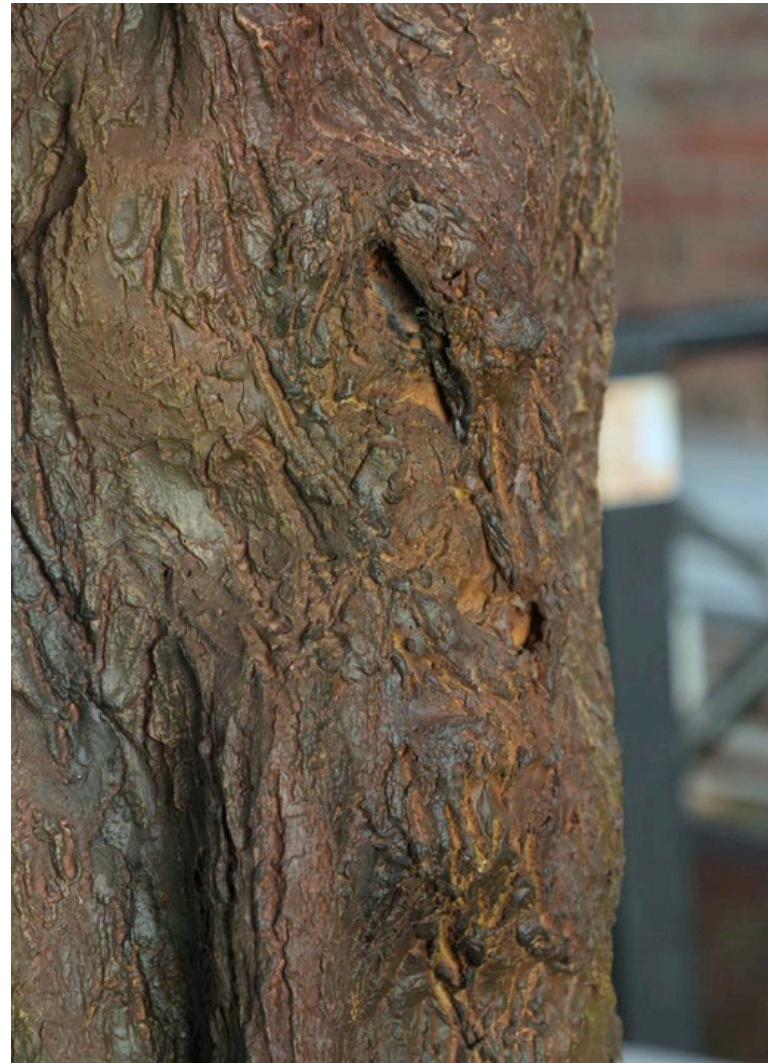

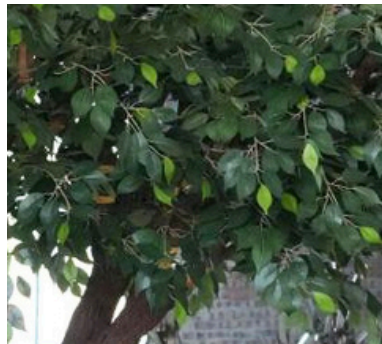

Sunlit interiors

Interior areas with strong daylight where fading or visual inconsistency is a concern.

Botanical Realism: Exploring Nature's Intricate

Experience the stunning realism of nature. From grand trees to delicate veins, every intricate detail is captured in this close-up exploration. Realism revealed.

Small-Quantity Capability

A PRACTICAL COMBINATION FOR DESIGN-LED PROJECTS THAT DO NOT REQUIRE BULK-ONLY ORDERING.

High realism

Oakco frames realism as a system: layering, variation, material detailing, and controlled composition.

Smaller quantities

Selected models can support smaller projects with simplified recommendation, quotation, and DDP-ready fulfilment pathways where suitable.

Innovation

Collaboration

How to Work With Us

01. Brief Share spatial intent, reference imagery, dimensions, use environment, and timing.

Best used for large trees, branded environments, integrated planter concepts, faux rock, illuminated features, and on-site fabricated cement trees.

02. Selection We proposes suitable models, systems, or custom directions.

03. Develop Scale, finish, vessel logic, structure, and pack documentation are aligned.

04. Delivery Production, quality review, packing, and shipping coordination move toward site readiness.

Sample Kit Pack

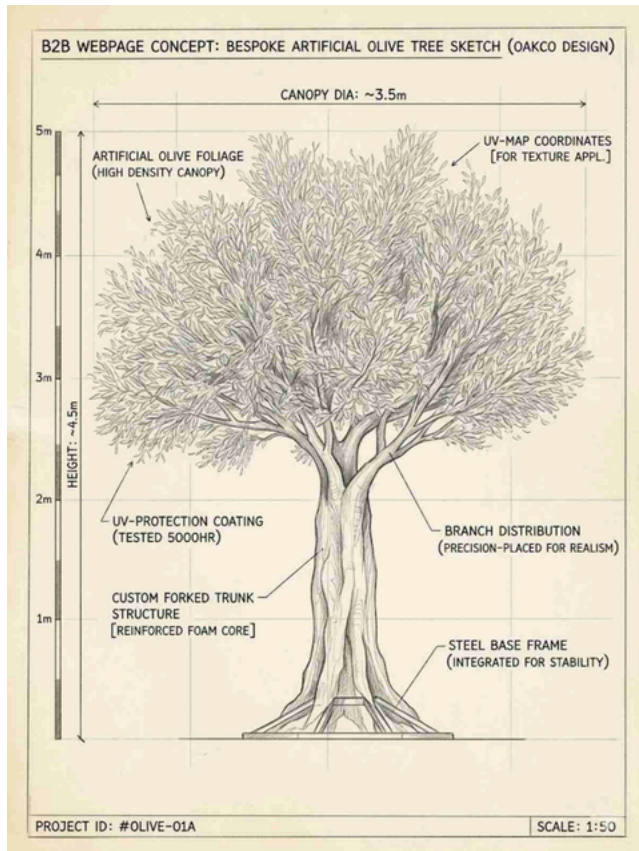

We can provide tree bark and leaf branch samples on request to help clients better evaluate surface finish, texture, and material direction during project discussion.

Bark Samples Available on Request

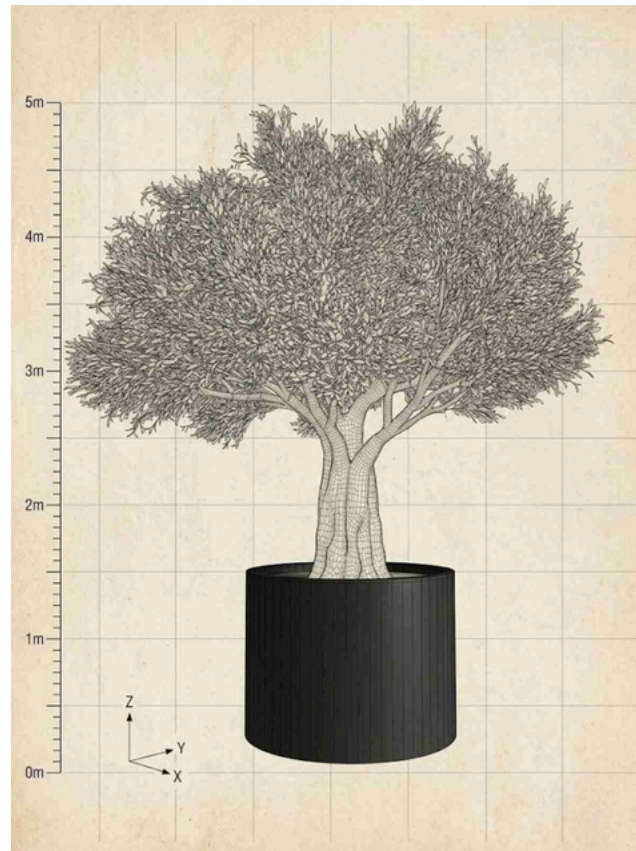

From Vision to Reality

FROM CONCEPT DEVELOPMENT TO FINAL INSTALLATION, OUR PROJECT TEAM PROVIDES END-TO-END ARTIFICIAL TREE SOLUTIONS FOR COMMERCIAL SPACES.

IDEA & CONCEPT

We translate your concept into a clear and workable tree proposal.

DIGITAL VISUALIZATION

Accurate 3D modeling helps refine scale, structure, and overall impact before production.

FINISHED INSTALLATION

The final installation brings the approved design into the real space with confidence.

Installation Support That Extends Beyond Supply

FOR PROJECT DELIVERIES THAT REQUIRE SMOOTHER SITE EXECUTION, WE CAN SUPPORT INSTALLATION WITH MANUALS, TECHNICAL COORDINATION, AND ON-SITE GUIDANCE.

*Available for
Commercial project*

01

Installation Manual

A clear manual can be prepared for each project, covering component identification, assembly sequence, connection details, and key site precautions.

Step-by-step site reference

02

On-Site Installation Crew

When required, technical personnel can be arranged to travel to the project site and assist with the physical installation process.

Hands-on site assistance

03

Engineer Guidance

Engineer-led guidance can be provided to support structural checks, installation coordination, and a cleaner final execution on site.

Technical oversight during installation

Support Note The level of installation support can be arranged according to project size, destination, site conditions, and installation complexity.

Categories

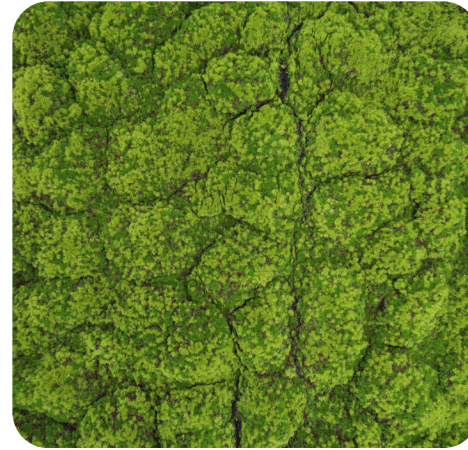

A commercial product landscape beyond the tree category.

Planters

Green Wall

Moss Panels

Artificial Turf

Topiary Ball

Topiary Tree

Cypress Tree

Landscaping

Tree Branches

Potted Olive Tree

Custom Decorative Containers

Artificial Rock

Illuminated Features

Artificial Stone Feature Wall

Design Resources for the Next Step

A cleaner way to continue project communication with designers, specifiers, and commercial teams.

CATALOG ACCESS

Keep the catalog as the starting point for product direction, visual references, and project communication.

Available on request for client presentation and internal review.

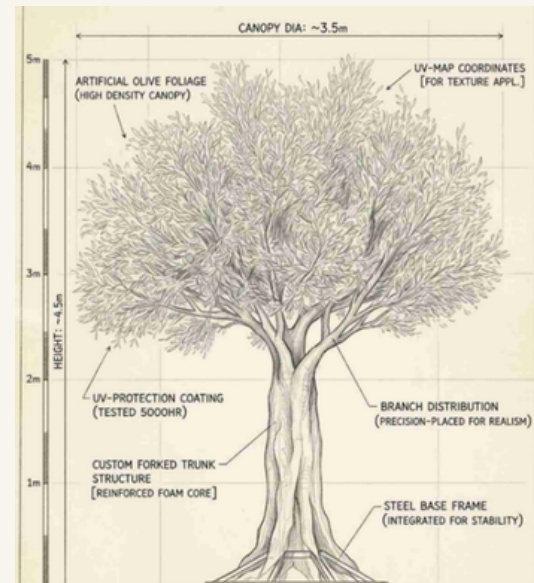

Contact us for the latest catalog

FOR DESIGNERS

Beyond the catalog, we can continue with design-ready resources.

For the next steps, you can get CAD drawings, project case references, specification sheets, and selected visuals from our catalog and resource library.

CAD Drawings

Concept and detailing support for review and coordination.

Project Cases

Built references that help align style and application.

3D Visuals

Helpful for scale, mood, and presentation discussions.

Suggested package: CAD drawing + related case study + specification sheet + matching catalog pages.

FAQ

Can smaller projects be supported?

Yes — selected models and scopes can be supported for smaller commercial projects and pilot quantities.

Is DDP delivery available?

DDP support can be arranged for selected orders and destinations, subject to project scope and logistics requirements.

Can trees be specified for fire performance?

Selected models can be configured through the PyroLeaf™ fire-performance pathway.

Do you support outdoor applications?

Yes — suitable models can be configured through the HelioLeaf™ UV-stability pathway.

Can you work from a design concept?

Yes — bespoke development can begin from references, mood boards, drawings, or application briefs.

How do we start?

Share the project type, quantity, dimensions, images, and timeline; a structured proposal can then be prepared.

Let's Build Your Next Commercial Greenery Project

Available for project proposals, catalog requests, model selection, specification support, and bespoke discussions.
